

## **Assystem acquires LogiKal**

*Assystem Group significantly strengthens its comprehensive PMO service capability to bolster infrastructure market offering and deliver UK energy transition projects.*

International engineering, digital services and project management company Assystem has acquired 100% of shares in leading project management and controls group LogiKal, which operates in UK and Asia-Pacific markets and generates annual revenue of ca. £15m (of which 65% is in the UK). This move aims to significantly strengthen Assystem's project management services offer by bringing over 100 skilled project management professionals into the Assystem Group.

Assystem provides a comprehensive project management office (PMO) service underpinned by cutting-edge digital solutions. Similarly, LogiKal leverages its digital capabilities and innovative tools to implement world-class integrated controls for projects. The combination of these two strengths will contribute to an enhanced offer to UK and international major infrastructure projects, where both companies have a footprint in key programmes such as the UK's high speed rail route (HS2), Lower Thames Crossing and National Grid. Internationally, LogiKal also brings experience from major projects including the Mass Transit Railway (MTR) in Hong Kong and the Sydney Metro.

By joining the Assystem Group, LogiKal will be able to tap into complementary service offers, which include commercial management, environmental, consents and engagement services, and enjoy the potential to access international markets across Assystem's 10 existing countries of operation.

LogiKal will also gain greater access to the UK's key low-carbon energy projects, including nuclear, fusion, renewables and hydrogen infrastructure, affording its staff the opportunity to join Assystem's Switcher community, and play a bigger role in supporting the global energy transition, which is the focal point of Assystem's **Switch On initiative**. Assystem is fully committed to tackling climate change and is active in driving the switch to a net-zero economy through the delivery of low-carbon energy and infrastructure projects.

**Christian Jeanneau, Assystem's Senior Vice-President – Digital** said: "Assystem's ambition is to accelerate the convergence of engineering and project management through digital. By bringing LogiKal into the Assystem corporate family we are taking a step further towards achieving this."

**Simon Barber, Assystem's UK Managing Director** said: "We are delighted to welcome LogiKal into the Assystem family and to be strengthening our comprehensive Project Management Office and wider digital services with a community of experts who are passionate about supporting the delivery of the low-carbon projects that are key to Britain's energy transition."

**Bryn Lockett, LogiKal's CEO** said: "Joining Assystem on its mission to support the drive to net zero will provide many opportunities to get involved in a range of exciting energy projects in the UK and around the world, as well as enhancing our well-established offer to the rail and infrastructure sectors. We are elated to be joining the Group's Switcher community to support global efforts to address climate change."

## **ABOUT ASSYSTEM**

Assystem is an independent international company with one main mission: to accelerate the energy transition worldwide. With more than 55 years of experience in highly regulated sectors with stringent safety and security constraints, the Group provides engineering, technical and programme management services as well as digital solutions and services to optimise the performance of complex infrastructure assets throughout their life cycle.

In its 10 countries of operation, Assystem's 6,500 experts are supporting the energy transition. To achieve an affordable low-carbon energy supply, Assystem is committed to the development of decarbonised electricity (nuclear, renewables and electricity grids) and clean hydrogen. The Group is also helping drive the use of decarbonised electricity in industrial sectors such as transportation. Assystem is currently ranked as the second independent nuclear engineering group in the world.
